Personal Portfolio Website

The purpose of my website is to showcase my skills and experiences that have shaped me into becoming a better programmer. I started building the website in November 2022 using a combination of CSS, JS, PHP, and HTML. I was inspired by [Aiden Chang](#), senior running back and computer science major at Carleton, who went live with his portfolio a month before I started building mine. I am a passionate individual who enjoys coding and wants to use technology to dramatically impact the world. My favorite programming language is Python and I am an avid video game fan. I have loved learning about front-end development throughout this project and look forward to seeing where my career takes me in the future. If you would like to connect with me, my linkedin and github can be found above or accessed through my website.
